If our phones/social media platforms/marketers and corporations, can track our PERSONAL information and interests to create algorithmic displays then why can't they catch pedophiles or people purchasing guns online?

Frankly, we need to update our security in the USA. We also need to have an open dialog about mental illness and criminology where mass shootings are considered.

As I suggested before, we should be giving students EVALUATION ASSESSMENTS EVERY YEAR!!

- This could potentially identify early onset personality disorders.
- This could also be used as a tool to customized better academic plans and curriculum.
- This could assist in bullying, suicide and mass shooting prevention.
- This could help parents to better understand their children.

🔴 In Re: Guns

- The illegal gun trade and relaxed regulations need to be revised and looked into further. Why aren't all bullets digital now?
- Why aren't ALL guns and bullets digital and registered in a large database that can be tracked and deactivated remotely?
- Why can't guns register the difference between humans and animals?
- Why can't they be digitally smarter?
- Why can't we update all guns digitally and then make ALL the old guns illegal?
- Why aren't there any hotlines for people when they have Homicidal thoughts?
