Comcode Distributor

The comcode distributor is a device which computes, compounds, and codes. Much like a pacemaker this device is installed on the body as hardware, (i.e. Vagnus Nerve Stimulation implant). The device will be very compact in size, and it's benefits include regulation and measurement of blood tests, and disease management for a number of chronic illnesses, including cancer, autoimmune disorders, and other diseases that require hands on medication management.

The Comcode monitors the body to collect and formulate patterned data which sent to a third-party location where the prescribing physician can view and manage remotely. It monitors and produces patterns of the body's cycle and distributes custom compounded medical dosages as PRN, exactly how you need it and when it need it.

This method will revolutionize the medicinal and pharmaceutical industry, as it can decrease the amount of drug abuse and accidental overdosing. It allows physicians to have a 365 scope of the patient's makeup and diseases. With the data collected by the Comcode, physicians can monitor more closely how a disease progress over time. Most importantly this can be used as a diagnostic tool, for further education, and preventive medicine, by capturing images and data in way which customized and revolutionize medication.
