## Biometric Scan for Firearm Purchase and Delivery

### Compliance Act Procedures

Biometric Scan for Firearm Purchase and Delivery Compliance Act Procedures.

Biometrics Scan for Firearm Purchase and Delivery Compliance Act Procedures requiring customers to complete a biometric scan upon purchasing firearms, in addition to presenting an ID or Passport, to complete transaction, both when purchasing and upon delivery with a verified digital biometric signature.

This procedure enforcing a digitally encrypted security screen, inscribed with unique and phantom coding specific to the enterprise thus making the biometrics information requiring a specific matching key for decryption, analysis, and confirmation, thus, in the case of hacking, this information cannot be compromised. The collection of biometrics data and the security controls in place to protect this data are of grave concern to groups like the Electronic Privacy Information Center (EPIC).

Biometrics Scan upon Delivery is mandatory to complete all firearms transactions in the United States. This would ensure that every person is not only accounted for, but also meets the age requirement, confirming the identity of card holder and other credentials required to purchases firearms.

**All vendors must comply to be an authorized distributor of firearms under federal regulation and standard practices.**

This technology and procedure are to be used alongside the Biometric Facial Comparison Technology already in place with the US Customs and Border Protection both purchasing and delivery.

This technology could prevent the buying of both legal and illegal firearms by children and other authorized purchasing with stolen credit cards.
