# Computative Persuasion Conditioning Therapy

## The Overview

During the process of Computative Persuasion Conditioning Therapy, the subject is shown specialized content which is relevant to the desired persuasion conditioning outcome unconsciously, while operating the platform and device. This process requires the reconfiguration of the telecommunication notification system alert operation actions in the cellular device.

The purpose of this procedural operation and reconfiguration is intended for the ability of transmitting specialized communications to recipients regarding the persuasion conditioning process, while adopting a similar methodology used in targeted advertising.

Computative Persuasion Conditioning Therapy dispatches selected specialized content using an algorithmic format to strengthen the user's connection to the cellular environment by reconfiguring the cellular notification alerts on every day social media platforms and applications to proselytize indoctrination of desired persuasion conditioning outcome.

These processes and procedural operation are accompanied by a moderator agent transmitter who is stationed at a base, operating the administrative access controls to the telecommunication layer content database, which can also operate manually in the persuasion conditioning process.

This operation is run on a different tier on Instagram and twitter.
