Interactive Orbital Grey Area Integration of Artificial Intelligence

Overview

Interactive Orbital Grey Area Integration of Artificial Intelligence is an advanced learning methodology in which an operating system alternatively and cognitively trains the learner to think in the same sequences in which the A.I instructions is computing for cognizance.

This procedural processing is designed to run in addition to the A.I processes of recording the subject's inputting data theorem to perform in a synchronous awareness.

Thus, achieving full scale cognitive configuration recollection for human development and processes.
