Progandi X System Detection Software

Overview

Progandi X System Detection Software uses A.I. machining and digital recognition to analyze linguistics data and patterning for classification criterion for detecting propagandist and terrorism paraphernalia in all language phrasing but also graphical delivery.

Progandi X System Detection Software is engineered for administrator access use, encompassing the majority of social media platforms and applications as a mandated government compliance initiative towards fighting terrorism, specifically, psychological cyber warfare.

In prohibiting unnecessary misclassification and quarantine holdings, the software operates with IAM/PAM access control methodology procedural tactics.

Enforcing security monitoring and procedural processes by segregated location mapping, which concentrates on high-risk territories and associated enterprises, utilizing the cyber security surveillance systems of Cyber-Micro-Expressions Computation quarantine server methodology.
