Socialgine Anti-Phishing Software

Overview

Socialgine Anti-Phishing Software organizes your company address book in a protective format sequencing, detecting when an unauthorized or a bad actor posing as an employee, vendor, student, customer or users sends an email from a non-registered address.

It flags the email address because it is different from the primary registered address, it then quarantines that email to a different server to be handled by IT.

This is software prevents social engineering attacks, specifically regarding spoofing, malicious links, baiting and catfishing, particular concerning when financial or personal data is being requested.
