Department of Homeland Security  
Sociologic Behavioral Profile Tracking and Alert System

**Overview**

Monitors suspicious activities on social media networks such content with high views and engagements but lacking action driven output such as likes and comments. This is a result as hoovering activity, often seen in attempts to observe intelligence undetected. Data can be pulled from social media enterprises in the event of attacks to verify engagements, surrounding users and that data regarding online behavioral pattern. As seen in [Behavioral Science of Online Harassment: Cyber-Micro-Expressions, Bullying and Stalking on Social Media](#).

Inputting prior data from news circuits, high engagement content, sociological factors such as protests, revolts, and subsequent casualties. Tracking foreign trade deal activities relating to the United States Territories.

This data acts as a monitoring system to determine the likelihood of an attack upon American soil in attempts in preventing sociologically behavioral patterns leading up to such catastrophic events.

Monitoring high-risk social media accounts who engage in radical issues relating to terroristic offenses as it relates to the United States Territory.

Utilizing the [Camascribe](#) system accumulate data report to immediate notify Homeland Security and Department of Defense.
