## **R.D.E.A**

### **Retroactive Data Extraction Analysis**

#### **Overview**

This software is designed to operate in a crawl and spider automation in conjunction with data backload and caches from prior operating systems and social platforms both distinct and modified.

The purpose of this application is to extract all data into a specialized search engine for containment required during the process of classification and identification specific to case requirements and investigation.

The purpose of this operation is to extraction from data from chats, emails, texts, pictures, location, social media behavior analysis, GPS, and recorded operation executions within desired extraction points.

This process and procedure can be used for attaining information regarding missing children past cases, murder cases much like retroactive DNA evidence analysis.

The information gather can be used for further investigative research in medical and criminology case studies within the Acaary Database.
