# The Department of Homeland Security: Elective Mental Health Junior Military Logistic Analyst and Veteran Research Program

## Overview

Elective Mental Health Junior Military Logistics Analyst and Veteran Research Program is an innovative program in which military agencies recruit teens who have been rigorously evaluated by mental health professionals for eligibility. The applicant must meet a certain standard of criteria, i.e., a certain number of behavioral hospitalizations and diagnostics.

Military recruiters can opt to participate in this program which requires leading school assemblies to speak to teens about school shootings and develop an opportunity for opening communication lines regarding the heavily documented interests in assault rifles involved in school shootings. Thus, providing a healthier alternative for possible recruits who have diagnosis with and/or behavioral problems which psychotic violent features. This program will not be operated on base nor will military clearance be granted.

As noted with many school shootings which often end in self-inflicted outcomes, these recruits will be essential for providing predatorial natural instinct-based knowledge for future defense operation research data. If the recruit is over 18, they then can opt to participate in special forces assignments with mirrored outcomes.

In the case of long-term recruits, they can provide insight into infrastructure building tactics regarding natural born predatorial instinctual hunting strategies which their condition causes them a predisposition to.

The data obtained will be used for The Department of Defense Quantitative Strategic Operation Defense System (Q.S.O.D).

This program encourages veterans to participate in the on-going research study operation who have development c-ptsd which violent psychotic features and urges, for ongoing observation and healthcare in exchange research study.

The goal is to understand these disorders by way of research and build better relationships within the community.
